

PJL-TSCM (Debugging)

Technical Surveillance Counter Measure

- Detection of Listening Devices/Bugs & Hidden Video Cameras
- Technical Surveillance Counter Measure (TSCM) Sweeps
- Conference room, boardroom, office, home, vehicles, computers, IT, telephones, MDF & PABX.

Lynch Investigations & Countermeasures is an organisation that provides a unique debugging service with the latest technology. Our certified, trained and skilled technicians will keep your organisation informed by reporting back to you in regards to the concerns we have identified within your operational infrastructure and your environment.

We provide a sweep and a physical search of your premises with the utmost serious considerations regarding your intelligence/conversations being compromised. This is a high priority concern for successful and ongoing business/personal relations for your organisation, yourself or your family and other business partners/persons that you may be involved with.

Lynch Investigations & Countermeasures Pty Ltd's director Peter John Lynch (PJL) has had many years of hands on experience being exposed to the construction and design of listening devices and hidden video cameras. His background makes the business of Lynch Investigations & Countermeasures debugging services extremely unique and competitive in the market of debugging (TSCM) sweeps. Knowing the construction, design and operational characteristics of different types of listening devices and hidden video cameras allows our services to be tailored to your individual needs and your environment. The agent in charge of your sweep and physical search will know exactly where to sweep and where to search for the listening devices and the hidden video cameras and where those particular device types have the potential to be hidden in your environment.

Your legal right to privacy in regards to conversations, video monitoring and recording of your environment is often abused by criminals who plant listening devices and video cameras in your home, conference room, boardroom, office, vehicle, computers, IT, PABX, MDF and telephone systems in breach of Federal and State laws.

At Lynch Investigations & Countermeasures we understand the laws relating to the Listening Devices Act and the Surveillance Act. Conversation intercepts and video monitoring or recording without your given permission on your premises or in your motor vehicle is highly illegal without a lawful reason to do so.

Lynch Investigations & Countermeasures understands the importance of discretion and confidentiality allowing us to provide you with an understanding of how you can protect your rights and your confidentiality.

We understand that information that is discussed in confidence with trusted parties can come into the possession of the other side possibly a business competitor, rival or marital partner.

At Lynch Investigations & Countermeasures we can provide you with a risk assessment in addition to our debugging (TSCM) services. Your needs will be attended to by our trained and skilled technicians upon your request and the debugging (TSCM) service needs that you have.

The director of Lynch Investigations & Countermeasures Pty Ltd, Peter John Lynch (PJL) has written articles on the techniques of debugging and he holds certified debugging (TSCM) training and much skill in debugging (TSCM). Please visit the articles web pages for a more detailed and informed choice of employing your debugging services and what is involved in the debugging (TSCM) process.

If you believe that your premises are being bugged, watched or listened to by unauthorised persons we ask that you should be cautious about how you go about the detection process. If you believe that information is being intercepted by listening or video camera devices you shouldn't discuss the suspicion within the confines of the area you believe is being unlawfully intercepted. The most secure location to discuss your suspicions about being bugged is away from the premises of concern. You shouldn't attempt to use a landline from the premises that you suspect is being bugged, rather contact us when you are well away from the area of concern via a mobile cell phone or better still a public telephone that you would never normally use. If your business is being bugged it is quite possible that your home premises are being bugged and your vehicle may also be being bugged or tracked.

To contact Lynch Investigations & Countermeasures the most secure way to use is by using a mobile cell phone, email or using a public telephone well away from the premises of concern. Don't attempt to contact us from a mobile cell phone from inside of a motor vehicle for the motor vehicle could also be fitted with a listening device or video/audio camera.

We at Lynch Investigations & Countermeasures know that the detection of listening devices, hidden video cameras and tracking devices shouldn't be carried out during normal trading hours for discretionary reasons but if for some reason you may suspect that the listening devices or hidden video cameras are operating through normal business hours only, we can arrange with you to visit the area of concern at any time suitable 24 hours 365 days of the year.

Contact PJL Lynch Investigations & Countermeasures Pty Ltd on [+61417260650](tel:+61417260650) or email to peterlynch@pjlinvestigations.com.au for a free consultation. If you call from your mobile cell phone be sure to mention that you are away from the area of concern so we know we can securely discuss your problem. This way we can resolve your problem and give you peace of mind for you to continue with your day to day activities knowing that you have eliminated the risk of espionage or eavesdropping.
